

CHINOOK PCN PRIORITY INITIATIVES

1

Advancing the Patient's Medical Home

CPCN supports clinics to provide care for their patients, through implementing the 'Patient's Medical Home Model.' We enable teams to work to full scope of practice by supporting best practice, collaboration, quality improvement, and innovation to optimize care.

2

Connecting the Health System

CPCN helps connect the health system to support the Patient's Medical Home. We develop and maintain partnerships with local and provincial health agencies to support secondary and specialty care, implement evidence-based care pathways, strengthen community partnerships, and integrate technologies that enhance patient care, safety, and overall health system effectiveness.

3

Driving High Quality Care Through Measurement and Evaluation

Measurement and evaluation are foundational pieces of the work of CPCN, pioneering methods of data collection and evidence-based clinical measurement. We focus on data collection and analysis tailored to each clinic, resulting in higher quality care and improved access for patients.

4

High Performance Governance Culture

We strive to foster a high-performing governance culture across the entire Network through effective board composition, strong accountability, sound fiscal management, clearly defined roles for PCN-funded staff, and ongoing board training and self-assessment.

5

Sustainably Improving Equity for Underserved Patients

Communities recognize the importance of culturally appropriate, patient-centered care that addresses social needs and acknowledges the unique circumstances of marginalized populations. We commit to exploring new delivery models and approaches to address the needs and improve access to primary health care for unattached and equity deserving populations.
